Drinkwell® Adds a Garden to Popular Pet Fountain

New Aqua Garden™ for Cats Will Help Their Digestion and Save Your Plants!

(Reno, NV) January 23, 2006- Veterinary Ventures Inc. President Sean Rowe announced today that the company has launched a new companion product to its popular Drinkwell® The Original Pet Fountain. The Aqua Garden™ hydroponic cat grass garden easily attaches to the Drinkwell® fountain and grows a natural treat of 100% organic wheat grass that cats love.

The Aqua Garden™ aids in digestion, hairball control, and saves houseplants from your cats natural urge for fiber. Making use of the continuously circulating water of the Drinkwell® Original Pet Fountain the grass grows out of the basket in 4-6 days and does not require soil. Additionally, the product does not contain additives so *it* is truly healthy for cats. Each seed pod will last 1-2 weeks, replacement pod packs are also available for continued use.

Rowe commented on the company's newest addition, "We are excited to launch the Aqua Garden™. The fountain has been tremendously successful and we hope this product will make our customers and their cats that much happier. We are committed to continuously developing products that contribute to the well being of cats and dogs, which are also convenient for their owners."

Drinkwell® The Original Pet Fountain satisfies a pets' preference for running water and their need for proper hydration, while also serving as a convenience product for owners. The easily maintained product holds more than one gallon of water (with the use of an optional reservoir) and best of all keeps pets off of counters and out of sinks and toilets. Drinkwell® Aqua Garden™ is available at PETSMART, PETCO and other pet retail stores throughout the country. MSRP \$8.99. For more information, or sales locations, visit www.petfountain.com.
